

Where speed meets strength.

Mike and Bob Ross, of Ross Construction, have been building homes since 1964. Originally, their floor systems were built with dimensional lumber. In 1994 they started using the OJ2000 product, and have not looked back since. When asked why they use OJ2000 in each house they build, they responded with the following:

- No “squeaking” in the floors
- Longer Spans
- Ease of installation with plumbing, heating, and electrical
- “Allows us to build houses that stand out from others in the area”
